DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 17-19, drawn to a head suspension assembly, classified in class 360, subclass 244.9.
- II. Claims 12-16 and 20, drawn to a method of manufacturing a head suspension assembly, classified in class 29, subclass 603+.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the head suspension assembly can be formed by removing material from the bend region and severing the strut from the damping support structure before forming a mounting region of the head suspension adjacent to the bend region.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
